Burpee's Lettuce

Earliest and Forcing Lettuce

This type is grown extensively as a forcing crop in the greenhouse during winter and in the frames early in spring and late in the fall. All the varieties of this class are excellent for early sowing in the home garden or grown for a fall supply. Sown out-of-doors in early spring or in late summer, they will develop well during the cool weather, but they cannot withstand the heat of summer.

BURPEE'S CABBAGE

Cabbage succeeds best in cool moist climates, and in rather heavy friable loams with gravelly subsoil. Early cabbage is sown in the hotbed or in the house about the middle of February. Late cabbage for winter use is sown during June. One ounce will produce about 2000 plants. If seeded outdoors, sow one ounce to 300 feet of drill. Two ounces sown in the hotbed will give sufficient plants to set out an acre; sow 6 ounces in the open seed-bed for planting out one acre.

168 Burpee's Extra-Early Jersey Wakefield ◎

Long Island Grown Seed

A quality variety with round heads averaging about eight pounds in weight. They are very solid and have a small core. The plants are short stemmed, the heads being produced almost on the surface of the ground. Ready as early as Early Jersey Wakefield but giving a much heavier yield per acre than that popular Cabbage. A most productive variety of attractive appearance. This strain is particularly fine. Pkt. 10¢; oz. 40¢; 4 ozs. \$1.20; 1/2 lb. \$2.20; lb. \$4.00; 2 lbs. \$7.45; 5 lbs. \$18.00, postpaid.

Broccoli—Winter Cauliflower

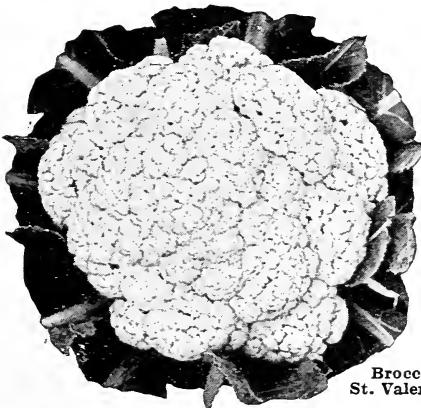

Broccoli has within late years become a favorite vegetable, perhaps due to the fact that new varieties of different characters have greatly widened its range of appeal. St. Valentine resembles an ordinary Cauliflower quite closely, but Curtis' Nine Star Perennial and Early Sprouting Annual varieties are very distinct in appearance and usefulness. Broccoli does best in rich soil and cool weather.

156 Curtis' Nine Star Perennial

This is quite a departure from the ordinary Broccoli. The plant is perennial under average conditions. It will produce from 5 to 15 marketable heads on a single plant and will continue to do this year after year. The plants will withstand quite a bit of frost. Sow the seed in April or May and plant out during June, July, or August, setting the plants 4 feet apart on well-manured land. By the following March a permanent bed of Broccoli, which will produce 5 to 15 heads on each plant, will be ready for harvest. The heads have a fine close curd and they measure 6 to 10 inches in diameter. This has a most agreeable Cauliflower-like flavor. Pkt. 35¢; 1/4 oz. \$2.30; 1/2 oz. \$4.00; oz. \$7.00; 4 ozs. \$20.50; 1/2 lb. \$37.50; lb. \$70.00, postpaid.

157 Sprouting Annual Broccoli

This variety is another distinct departure from Broccoli in which the sprouting branches have loose heads which can be broken off and cooked like Cauliflower or Brussels Sprouts. Sow the seed in May and harvest the sprouts in August. They must be used when ready, otherwise they will run to seed quickly. Pkt. 10¢; 1/2 oz. 25¢; oz. 40¢; 4 ozs. \$1.15; 1/2 lb. \$1.90; lb. \$3.50, postpaid.

Requires a long season and cool weather to grow well. Pkt. 15¢; 1/4 oz. 25¢; 1/2 oz. 45¢; oz. 75¢; 4 ozs. \$2.25; 1/2 lb. \$4.10; lb. \$7.50, postpaid.

Burpee's Cauliflower

For an early crop start the seed indoors and set in the open about the end of April. For a main or fall crop, seed should be sown from June 1 to July 1 and the young plants set out during the latter part of July. In this locality (Philadelphia) the early dwarf varieties, such as Snowball, give best results also for the fall crop. Farther south the large late varieties are quite satisfactory for late or winter heading. One ounce will give from 1000 to 1500 good strong plants.

246 Burpee's Fordhook ◎

A Marvelous New Early Cauliflower

Burpee's Golden Self-Blanching

262 Burpee's Golden Self-Blanching Celery ◎

Selected French-Grown Seed, Original Dwarf Strain

Although the seed grown in America the first year from the French stock, as offered below, gives general satisfaction in the home garden, yet most of the extensive growers insist upon having the French-grown seed, even though it costs nearly double the price.

The plants make a uniform, dwarf, and compact growth, with quite thick waxen yellow stalks of superior flavor. Crisp and nutty. Pkt. 25¢; 1/2 oz. 70¢; oz. \$1.20; 4 ozs. \$3.60; 1/2 lb. \$6.60; lb. \$12.00, postpaid.

The foliage is also quite distinct and has been bred for disease resistance. The slender heart is well blanched. It is an extra-early variety which should be carefully tested by Celery growers to determine its adaptability to their peculiar growing conditions and its market value. Because of their taller growth, the plants require more labor if they are blanched with earth. Pkt. 25¢; 1/2 oz. 70¢; oz. \$1.20; 4 ozs. \$3.60; 1/2 lb. \$6.60; lb. \$12.00, postpaid.

The Largest, Most Solid, and Finest Nut-Flavored Celery in Existence

Burpee's Fordhook Celery

is a distinct and foremost variety for fall and winter storing. The plants make a dwarf, compact growth, averaging 15 to 18 inches long. Because of its compact habit, Burpee's Fordhook Celery is by far more easily blanched than the tall varieties. Although comparatively dwarf, the plants are so solid that they weigh fully two pounds.

Burpee's Fordhook Celery is of remarkably fine quality. The stalks are smooth and entirely free from stringy fibers. They measure **over one-half inch through** when cut. When properly blanched, they are pure white, the small tender heart showing a tinge of light buttery yellow. Burpee's Fordhook Celery has an unsurpassed crisp, nutty flavor. Not long ago a grower wrote in the Market Growers' Journal: "I bought my 'Fordhook' from Burpee Co. I like it *best of any kind* I have tried. The quality of it has made a big demand for it here."

The excellent quality of our special strain of Burpee's Fordhook Celery is the immediate result of the care we take every year in making single plant selections of the most perfect and true-to-type plants grown on Burpee's FORDHOOK FARMS. This is one of the finest dwarf winter Celeries we have ever grown, being quite similar to the Golden Self-Blanching in height and habit, but with leaves of a rich green color and resembling in this respect the Giant Pascal. Cucumbers

Cucumbers should be grown in every garden to furnish both large fruits for slicing for the table and small young fruits for pickling. In most sections it will be best to make two sowings: one as early in the spring as the weather permits, to supply fruits for the table during the summer months, and a second about the last of June or first of July, to furnish fruits for fall use. This late sowing will also give the best supply of young fruits for pickling purposes: the cool fall months are the best time to put them up for winter use. One ounce is sufficient for 100 hills, and 1 to 2 pounds are needed to plant one acre.

Burpee's Watermelon

Rich, rather sandy soils produce the finest crops of Watermelons, but a well-drained loam, especially with a southern exposure, is also suitable. Two shovelfuls of well-decomposed manure should be mixed with the soil of each hill. Watermelons should not be planted until the weather is quite warm. The plants grow vigorously and for this reason the hills should be about 6 to 8 feet apart. Place 6 to 8 seeds edgewise, with the eyes downward, in a circle in each hill, and cover $\frac{1}{2}$ inch deep with fine soil. One ounce will plant 20 to 25 hills; 4 to 5 pounds per acre.

Pumpkins

Pumpkins can be grown easily among a crop of sweet or field corn or wherever there is ample room for the vines to spread. In the small garden they can be grown by planting the seed near a palings fence or some low building over which the vines can run without interfering with other crops in the garden. In field culture it is best to make the hills 10 feet or more apart each way, so that the vines may have plenty of room to spread. One ounce will plant 25 to 30 hills, according to size of seed; 4 pounds per acre.

BURPEE'S PEPPERS

Although the Pepper is at home in tropical and subtropical countries, it is grown successfully in nearly all parts of the United States. We are planting annually many acres of peppers for seed on BURPEE'S SUNNYBROOK FARM in New Jersey. It is a tender plant and cannot endure frost. The seed should be sown during February or March in a warm hotbed, or in boxes placed in the sunny window of a warm room. The seeds require plenty of moisture and warmth to germinate. The young plants are transplanted into small pots as soon as they can be handled. In the vicinity of Philadelphia the first week of May is about right for setting the plants in the open. One ounce will produce about 1,500 plants; 3 ounces for setting out one acre.

The surface of the fruit is smooth and free from cracks or other irregularities. The plants of Golden Dwarf Champion are of true bush growth, with an abundance of rich green foliage. 1089 Marglobe ◎

Illustrated in color on the opposite page. No other Tomato introduced within recent years has become known as quickly as Marglobe. Another outstanding characteristic of Marglobe is its resistance to Nail Head Rust and Fusarium Wilt.

Within a very short time growers along the east coast, all the way down to Florida, have quickly accepted this new Tomato because of its many outstanding features. Young fruits have a tendency to be of a somewhat oval shape, assuming a perfect globe form when fully matured. Very solid flesh with excellent eating qualities. The Four Melons in the Picture

588

Fordhook Early Watermelon ◎

Fordhook Early is well known for its many excellent qualities. Perhaps the most outstanding characteristic is its earliness, the fruits maturing under normal conditions in about 85 days. Even though of quick growth, the melons grow quite large, weighing about 25 pounds each. They are of oval shape, with dark green rind, which is mottled and striped with a still deeper green color. The beautiful carmine flesh is juicy and deliciously sweet. Pkt. 10¢; oz. 25¢; 4 ozs. 50¢; 1/2 lb. 75¢; lb. \$1.25; 2 lbs. \$2.30; 5 lbs. \$5.50; 10 lbs. \$10.00, postpaid.

553

Hale's Best Muskmelon ◎

No other large melon matures as early as Hale's Best. Even in a season remarkable for its coldness it was ripe in 68 days after planting. The melons are oval, inclined to produce some fruits of somewhat more elongated shape. The beautiful salmon flesh is exceptionally thick and sweet, practically melting in the mouth. The fruits are broadly ribbed and covered with a heavy netting. Pkt. 10¢; oz. 25¢; 4 ozs. 60¢; 1/2 lb. 85¢; lb. \$1.50; 2 lbs. \$2.75; 5 lbs. \$6.60; 10 lbs. \$12.00, postpaid.

Burpee's Netted Gem Muskmelon ◎

The flesh is a beautiful light green, so sweet and luscious that it may be eaten close to the rind. The melons have a small seed cavity, and weigh about 1 1/2 pounds each. 574

Burpee's Fordhook Muskmelon ◎

Characterized by its outstanding luscious, sweet, and delicious flavor. A melon of flattened shape, with broad ribs and an attractive gray netting. The fruits grow to handy size, and present a most attractive appearance. The flesh is very thick, of a bright orange-salmon shade, reflecting its choice lusciousness. Burpee's Fordhook Muskmelon has become a standard variety in certain large melon-growing sections, and home gardeners who appreciate choice quality and productiveness have found it to be an excellent, easily grown variety for home use. Pkt. 10¢; oz. 25¢; 4 ozs. 55¢; 1/2 lb. 80¢; lb. \$1.40; 2 lbs. \$2.55; 5 lbs. \$6.15; 10 lbs. \$11.20, postpaid.

The most suitable soil for melons is a warm, sandy loam, well worked and enriched with old compost. Sow the seed in slightly raised hills, 4 to 6 feet apart each way. Eight to ten seeds are placed in each hill in a circle and are covered with an inch of fine soil. Melons thrive best on well-rotted compost, and a shovelful of old manure should be placed about 1/2 foot deep under each hill and firmly tramped down. The seed should be planted after the soil has warmed up and the weather is quite settled—about the middle of May. One ounce of seed for 40 to 50 hills; 2 to 5 pounds per acre.

Telephone—A prolific variety

Green Bush Beans

Beans belong to the tender class of vegetables, and the seed cannot be sown until the weather is quite warm—about the time the maples are well out in leaf. In the vicinity of Philadelphia early May is about the right time for the first sowing of bush beans. A warm, well-drained sandy loam is best suited. The beans are most delicious and should be picked before the pods have reached their full size. To provide for a continuous supply they should be sown every 10 to 14 days up to August 10th. Where the summers are hot and dry, sow up to the end of May and again from July 15th to August 10th. Plant the seed in rows not less than 18 inches apart, cover with 2 inches of fine dirt, and firm the soil to assist germination. One pound of seed sown thinly fills a row 250 feet long; usually 90 pounds of seed are sown per acre.

14 Extra-Early Red Valentine

(Improved Round-Pod Strain) The plants make a dwarf and compact growth, 15 to 18 inches tall. They are **hardy, mature early**, and produce an excellent crop of beans. The pods are 4 inches long, sharply pointed, round, and very fleshy, being deeply saddle-backed and brittle, but show strings when nearly fully grown. Planted extensively by market gardeners and also a favorite variety for canning. An outstanding variety of best quality. Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 40¢; 2 lbs. 70¢; 5 lbs. \$1.60; 10 lbs. \$3.00, postpaid. By express, 15 lbs. \$3.45; 25 lbs. \$5.50; 50 lbs. \$10.50; 100 lbs. \$20.00; 500 lbs. \$90.00.

15 Black Valentine

Popular in the South on account of its blight-resisting quality. Matures early and is most productive, bearing round, straight, dark green pods, nearly 6 inches long. They are very attractive but have strings. Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 40¢; 2 lbs. 70¢; 5 lbs. \$1.60; 10 lbs. \$3.00, postpaid. The fully round pods are very **fleshy** and **strictly stringless**. They are of a deep green color, and measure nearly 6 inches in length. The quality is excellent, fine grained, and of good flavor. It comes into bearing about the same time as Burpee's Stringless Green-Pod. Pkt. 10¢; $\frac{1}{2}$ lb. 35¢; lb. 55¢; 2 lbs. \$1.00; 5 lbs. \$2.25; 10 lbs. \$4.35, postpaid. By express, 15 lbs. \$5.40; 25 lbs. \$8.75; 50 lbs. \$17.00; 100 lbs. \$33.00.

22 Burpee's Fordhook Favorite ◎

A white-seeded Stringless Green-Pod. The bushes grow 18 to 20 inches tall. They are vigorous, forming a well-branched bush with rich green leaves. The bushes bear a good crop of attractive beans. The plants produce almost continuously if the pods are picked as soon as they have reached edible size. Fully grown pods measure $5\frac{1}{2}$ to $6\frac{1}{2}$ inches in length. They are nearly straight and measure $\frac{1}{2}$ inch wide and $\frac{1}{2}$ inch thick—so full and fleshy that they are practically round. They are **brittle, juicy**, and **entirely stringless at all stages of growth**. We recommend that those who intended to plant this in quantity, select Burpee's Stringless Green Pod offered at the top of the opposite page, as the two varieties are very similar, excepting the color of the seed. *Crop very short.* Pkt. 20¢; $\frac{1}{2}$ lb. 45¢, postpaid.

23 Giant Stringless Green-Pod

This variety is somewhat similar to Burpee's Stringless Green-Pod, but matures a few days later. The pods are straight, quite long, and rather slender. The color of the pods is lighter than Burpee's Stringless Green-Pod and they show deeper depressions between the beans. Bush Lima Beans

Lima Beans are a tender vegetable and the seed must not be planted until the nights have become quite warm—about the time the oak trees are in leaf. The middle of May is usually safe in the vicinity of Philadelphia. Stick the seed edge-wise 5 inches apart in the row. One pound will sow 150 feet of row.

63 Burpee Improved Bush Lima

The pods are truly enormous in size, borne abundantly, and well filled with handsome beans which are both larger and thicker than those of the popular Burpee's Bush Lima—and fully 8 days earlier!

It differs from Burpee's Bush Lima in having much larger pods, producing more beans, and being considerably thicker. The growth is vigorous, with heavy foliage. Full-grown bushes measure 30 inches in height and 24 inches across the top. The pods are borne frequently in what might be called "clusters" of from 5 to 8. They measure 5 to 6 inches long by $1\frac{1}{4}$ inches wide, and the full size beans are of luscious flavor. They mature in 85 to 95 days from the date of sowing, but should not be planted before the soil has warmed up and the weather is quite settled. 65 Burpee's Fordhook Bush Lima

Introduced by Burpee—The Most Popular of all Bush Lima Beans

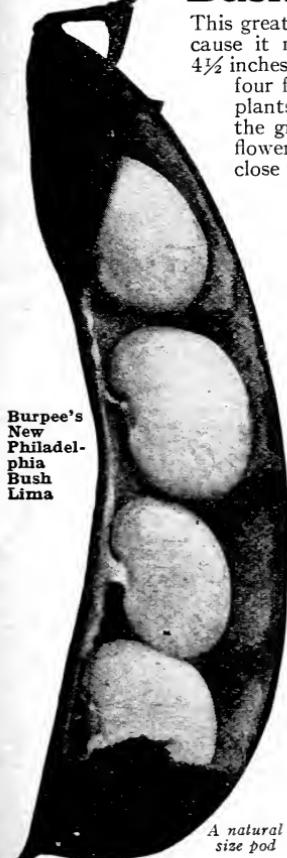

Burpee's Fordhook Bush Lima is in a class by itself. The plants grow 20 to 30 inches tall and make a spread of almost 2 feet. The strong, upright bushes withstand both whipping rains and strong winds to a remarkable degree. The pods are borne in what may be termed "clusters" composed of from 4 to 8 pods each. The individual pods are 4 to 5½ inches long and 1¼ inches wide. Quite often they are as much as ¾ inch thick. Each pod holds 4 to 5 of these large beans. Because of its extra-early maturity Fordhook will bear profusely even where the summers are comparatively short.

The flavor of Fordhook is outstanding—a delicious, sweet taste, not unlike chestnuts. Pkt. 15¢; ½ lb. 35¢; lb. 55¢; 2 lbs. \$1.00; 5 lbs. \$2.25; 10 lbs. \$4.35, postpaid. By express, 15 lbs. \$4.95; 25 lbs. \$8.00; 50 lbs. \$15.50; 100 lbs. \$30.00; 500 lbs. \$140.00.

Burpee's Branching Sweet Corn

Introduced in 1928

322 BURPEE'S BRANCHING is a sensational new Sweet Corn, carrying four, five, and even six ears on a single plant. A careful check of our seed plots has proven that under field culture the average is over three ears per plant—that is, twice the yield of any other variety.

Burpee's Branching Sweet Corn is Sweet and Tasty

Handsome ears, 7 inches long and $1\frac{3}{4}$ inches thick, carry pearly white kernels neatly arranged in 10 or 12 rows. Covered by a thin skin is a generous quantity of rich tasty pulp—as sweet and luscious as only real good Sweet Corn can be.

Burpee's Branching Sweet Corn is worth growing for its lusciousness alone, yet its free-branching habit insures double the yield of any other variety. While still quite young, the plants develop strong branches close to the ground as well as farther up the stalk—even the ears are carried on short branches, which makes pulling much easier and avoids injury to the main-stalks. Particularly well adapted to soils containing a fair quantity of sand. Ready for the table in 90 days.

306 "The Burpee" Sweet Corn

Rich and sweet. Larger and earlier than the famous Burpee Golden Bantam. A big, attractive ear, 7 inches long and $1\frac{3}{4}$ inches thick—a good size for eating from the cob—full of toothsome sweetness and nourishment, with the same buttery flavor that has given world-fame to Burpee's Golden Bantam. And to think that "The Burpee" matures ten days ahead of Golden Bantam! 5 to $5\frac{1}{2}$ feet tall, bearing an abundance of handsome, luscious ears.

Even though this new variety was necessarily costly when first offered last year, many of our customers were thoroughly convinced that a Sweet Corn named "The Burpee" was worth any price asked for it. The demand greatly exceeded our expectations. All during the past summer and fall we received a great number of unsolicited testimonials about the wonderful qualities of "The Burpee," and quite a few of our customers told us that our own description was by far too conservative. Yet our policy of telling in Burpee's Annual "*The Plain Truth about the Best Seeds That Grow*" does not permit us to give a description more enthusiastic than the plain facts stated above.

Burpee's Radishes

There are three distinct classes of radishes—Spring Radishes, Summer Radishes, and Winter Radishes. Every complete garden should include some of each class.

The Spring Radishes can be grown almost all the year around, and are important as a forcing crop during winter. They mature in the open in from 25 to 40 days, depending on the variety and the weather. They develop best during the cool season. Light sandy soil, rich in organic matter, is essential to produce crisp and tender radishes. **Plant as early in the spring as possible, and make succession plantings every 10 days.** Where the summers are hot, sow until the middle of May, then stop, but make three more sowings during August. Sow the seed thinly in shallow drills and cover with about one-quarter inch of fine soil. One ounce is sufficient for 100 feet of drill; 8 to 10 pounds of seed are needed to sow one acre planted in drills.

Burpee's Beets

Beets are of universal culture. It is advisable to make repeated sowings in order that a constant supply of tender young roots may be had throughout the season. Seed may be sown as **early in the spring** as the ground can be worked into good condition. **Sowings should be made for succession at least once a month up to the end of July.** We recommend making a large sowing early in July to produce a supply of full-grown roots for winter use. If the roots are gathered with the approach of cold weather and kept in a cool cellar packed in slightly moist earth, they remain in perfect condition throughout the winter until spring.

The seed should be sown thinly in drills from $\frac{1}{2}$ to 1 inch in depth, leaving 12 inches or more between the rows to admit cultivation. When well started, thin the plants to stand 3 to 4 inches apart in the row. One ounce will sow 100 feet of drill; 4 to 6 pounds are needed per acre in drills.

Although very early (quickly reaching a diameter of 2 inches), if left growing, the larger roots retain their fine flavor and deep coloring. Fully grown roots measure 3 inches across. Excellent for the home garden, and one of the best varieties for market on account of its earliness. Table Turnips

Turnips develop best during cool weather, and in the vicinity of Philadelphia a fine crop can be grown from seed sown early in the spring. The most popular method, however, is to broadcast the seed either between the rows of corn or in the cultivated orchard. The early white varieties are often sown as a catch crop after early Potatoes. One ounce will sow 400 feet of drill. In drills, 1 to 2 pounds per acre, sown broadcast, 4 to 5 pounds of seed are needed per acre.

Burpee's ONIONS

Onions rank as one of the foremost vegetables in American gardens. They are highly praised for their tonic qualities, and doctors everywhere are advocating the use of them in the diet because they are wholesome and nutritious.

A good, well-drained soil, reasonably fertile and well pulverized, will give the best crops. Cover the seed lightly and thin the seedlings when they are 3 to 4 inches tall so that they will have room to develop freely. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. One ounce of seed for 200 feet of drill; 4 to 5 pounds per acre.

Burpee's Phlox

Phlox is one of the easiest grown and most satisfactory of all summer-flowering annuals. The brilliant colors always make a good impression. One of the most valuable characteristics of this annual is its free-blooming habit, but in order to have good stocky plants the seedlings should be thinned to stand not less than 6 inches apart in the row. The plants grow 15 inches tall. Sow early in the spring.

2581 Fordhook Finest Mixed

We are offering a blend of all the varieties of the tall annual Phlox described on this page, and have added a few other large-flowered varieties which we feel deserve a place in the mixture. It will make a fine display of brilliant colors, and the well-rounded, closely formed flower-heads with their long stems will make fine cut-flowers. Grow plants of this annual Phlox either in the border, or in large, solid beds. Pkt. 10¢; $\frac{1}{8}$ oz. 25¢; $\frac{1}{4}$ oz. 35¢; $\frac{1}{2}$ oz. 55¢; oz. 95¢.

Everlasting Flowers

Within recent years the Everlasting Flowers have again become very popular. They were great favorites with our grandparents, who grew them for garden decoration and winter bouquets. They are easy to grow and bloom freely and continuously during summer and fall, requiring no special kind of soil or care. Any good garden soil, even that which is rather heavy, is suitable.

Sow the seed when the maples are coming into leaf and cover thinly with fine soil, pressing the surface of the bed firmly to bring the seed into close contact with the soil. Thin the plants from time to time to give them plenty of space to develop freely.

2854 Everlastings Mixed

This is an excellent mixture, including the finest Everlasting Annuals in existence. In addition to those listed on this page, we have added a few others which give brightness and variety to this assortment. We feel sure that those who grow it will be delighted with the display it will give in the garden. All of the varieties may be cut when the flowers are fully open and dried for winter use by hanging them head down in a cool and airy place. Within recent years Everlastings have again become very popular. Considering their value for winter decoration, together with their showiness in the garden, this is not to be wondered at. 1001 Garden Questions Answered

by A. C. Hottes

Authoritative answers to the many questions which confront home gardeners. Three hundred pages with many beautiful illustrations. Includes notes on Flowers, Vegetables, Fruits, Spraying, Garden Construction, Hybridizing, etc. Cloth bound, postpaid, for **\$2.15**

Strawflowers, or Helichrysum, are in great demand not only for the fine effect they give in beds and borders and as cut-flowers, but also because they can be dried for winter bouquets. Cut the flowers early in the morning while the dew is still on them, and hang them heads down in a cool, shady, and airy place until thoroughly dry. Strawflowers are easy to grow and do well under the most varied conditions of weather and soil met with in America. They do best if planted where they get sunlight all day long. The plants grow 16 to 21 inches tall and bloom from July until frost.

Sow the seed outdoors when the maples are coming into leaf and cover with $\frac{1}{4}$ inch of fine soil. For extra-early flowering sow indoors the end of March or early in April.

2840 Fire Ball A most popular Strawflower because of the richness and brightness of its blooms. They are an intense and vivid rich red color; large, well formed, and borne on long, stiff stems. Fire Ball retains the brilliancy of its color even after being dried for winter use. Looks its best combined with white. Pkt. 10¢; $\frac{1}{8}$ oz. 25¢; $\frac{1}{4}$ oz. 35¢.

2841 Copper King Here is a comparatively new color that will appeal to many because of its unusual shade—a rich coppery brown with a striking metallic luster. Copper King blooms freely and carries its flowers on good long stems above a wealth of rich green foliage. This never fails to attract favorable attention. Pkt. 10¢; $\frac{1}{8}$ oz. 25¢; $\frac{1}{4}$ oz. 35¢.

2842 Golden Ball Golden Ball is one of the most popular varieties in Strawflowers. It is well formed, as the blooms are fully double and almost ball shaped. The color is a glistening rich golden yellow, retaining all its brilliancy after the flowers are dried for winter. Pkt. 10¢; $\frac{1}{8}$ oz. 25¢; $\frac{1}{4}$ oz. 35¢.

2844 Snowball Snowball is another favorite with many gardeners, as the flowers are large, well formed, and are borne profusely on fine long stems. Commercial growers plant it in quantities as it is easily dried for winter and can be dyed to any desired color. The blooms are large and very beautiful. Pkt. 10¢; $\frac{1}{8}$ oz. 30¢; $\frac{1}{4}$ oz. 50¢.

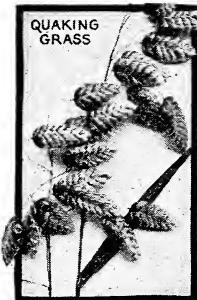

2847 Rose Queen A lovely flower for both garden decoration and boxes. Its large, double blooms represent various shades of rose, some of them being richer in color; others, again, are of a somewhat more delicate shade. A flower of remarkable size and good form, with large individual petals placed closely together. Pkt. 10¢; $\frac{1}{8}$ oz. 30¢; $\frac{1}{4}$ oz. 50¢.

2848 Salmon Queen Many gardeners seem to have a particular preference for flowers that shade into salmon. The color is vivid yet soft. The blooms are of good, well-rounded, double form. They make an excellent display in the garden and are fully as valuable for bouquets during the summer or winter. Pkt. 10¢; $\frac{1}{8}$ oz. 25¢; $\frac{1}{4}$ oz. 35¢.

2849 Violet Queen A color that is comparatively little seen among Strawflowers, yet it is one of the showiest and most striking. Even though it was introduced only a short while ago, it has already become a favorite with many who choose to plant it. The color is a rich and intense violet. Pkt. 10¢; $\frac{1}{8}$ oz. 25¢; $\frac{1}{4}$ oz. 35¢.

2846 Mixed We pride ourselves with this mixture because we believe that it contains the right proportion of every color to give a good display. You will find in it the seven separate colors listed on this page as well as a number of others. Pkt. 10¢; $\frac{1}{8}$ oz. 25¢; $\frac{1}{4}$ oz. 35¢.

ORNAMENTAL GRASSES

2863 Quaking Grass

(Briza maxima) Those who grow flowers for winter bouquets should not overlook this charming Ornamental Grass. The bushy plants grow 12 to 15 inches tall and bear a profusion of interestingly shaped flowers. Useful for edges to beds or borders, with its thin-stemmed flowers. Lasts a long time. Pkt. 10¢; $\frac{1}{8}$ oz. 20¢; $\frac{1}{4}$ oz. 30¢; $\frac{1}{2}$ oz. 50¢.

Ornamental Grasses should be grown for garden decoration and for winter bouquets. For winter use it is very important that the stalks be cut early in the morning while they are still wet with dew. They are then placed in a cool, dry, and airy room in their natural position until they are perfectly dry.

2858 CLOUD GRASS (*Agrostis nebulosa*) The reddish green flower-heads form a much branched, feathery top. A bed of this has the appearance of a cloud resting lightly on the ground, and the faintest breeze sways the flowers forward and backward. Blooms from July until September. Pkt. 10¢; $\frac{1}{8}$ oz. 45¢; $\frac{1}{4}$ oz. 75¢; $\frac{1}{2}$ oz. \$1.25.

2868 JOB'S TEARS (*Coix lacryma*) An interesting, luxuriant grass, grown for its large seeds, which are used for beads; 3 feet tall. Pkt. 10¢; $\frac{1}{2}$ oz. 20¢; oz. 30¢.

2870 HARDY PAMPAS GRASS (*Erianthus Ravennae*) A beautiful hardy grass. Tall, purplish violet flower-heads turning to silky gray as they mature; 2-6 feet tall. Pkt. 10¢; $\frac{1}{8}$ oz. 20¢; $\frac{1}{4}$ oz. 30¢; $\frac{1}{2}$ oz. 50¢; oz. 85¢.

2883 PLUME GRASS (*Trichloa rosea*) An attractive grass with pale pink plumes. Suitable for borders or winter bouquets; 2 feet tall. Pkt. 10¢; $\frac{1}{8}$ oz. 20¢; $\frac{1}{4}$ oz. 30¢.

2881 Fountain Grass

(Pennisetum Ruppelii) Long feathery purplish plumes which look very attractive in the border or in bouquets. Does best in a light rich soil where it is exposed to the sun and can get plenty of water. It looks particularly well if used as a border to Cannas, Salvias, and other taller flowers, also as an edging to pools and streams. Pkt. 10¢; $\frac{1}{8}$ oz. 45¢; $\frac{1}{4}$ oz. 75¢; $\frac{1}{2}$ oz. \$1.25.

Burpee's World-Famous Sweet Peas

Two Ruffled Sweet Peas

3487 Ruffled Rose

New for 1929. This is a new Giant of the Ruffled class, even larger than Fluffy Ruffles, introduced by us last year. Ruffled Rose is of a soft but rich shade of rose with an over-sheen of salmon, which adds great warmth and attractiveness to the flower. The blooms are truly gigantic in size; six sprays make a bunch more massive than twelve ordinary Sweet Peas. Ruffled Rose is a hybrid and has a tendency to produce some flowers of a cherry-rose color, which also are ruffled. Pkt. (20 seeds) 25¢; 1/2 oz. \$1.25; oz. \$2.25; 4 ozs. \$7.50; 1/2 lb. \$13.75; lb. \$25.00.

3413 Fluffy Ruffles

Novelty of 1928. Our sensational novelty of 1928. A great, big flower, vigorous and free blooming—the first one of the Ruffled Sweet Peas, introduced by us last year. The blooms are duplexed and frilled, so much that they appear almost double. The sprays are well proportioned, carrying four almost globular flowers. The color is lovely rich rose-pink with a gleam of soft salmon and an undertone of bright primrose, blended into an exquisite shade of cream-pink. Truly a lovely and exquisite flower. Pkt. 15¢; 1/2 oz. 40¢; oz. 70¢; 4 ozs. \$2.25; 1/2 lb. \$4.15; lb. \$7.50.

3403 Ambassador

New for 1929. Ambassador is a big flower, well formed and exquisitely waved, borne in fours on very long stems. The vine is vigorous and free flowering. Ambassador is a clear deep rose-pink on a background of deep primrose. The color is decidedly lighter at the base of the standard and wings, and also on the margins. It is indeed a lovely flower. Pkt. (20 seeds) 25¢; 1/2 oz. \$1.25; oz. \$2.25; 4 ozs. \$7.50; 1/2 lb. \$13.75; lb. \$25.00.

A Word About Burpee's Sweet Peas

Sweet Peas are a leading Burpee specialty. Our Floradale Farms, in Santa Barbara County, California, were established almost twenty years ago for growing the best Sweet Pea seed that could be produced anywhere. Year in and year out, our experts are working to improve existing varieties and assist nature in giving us new colors, larger and better flowers, longer stems, richer fragrance, and more blooms. The latest achievements of Burpee are the Ruffled Sweet Peas. "Ruffled Rose" and "Fluffy Ruffles" are the first two belonging to this unique and beautiful type.

Burpee's Fordhook Farms, in Bucks County, Pennsylvania, also deserve mention, because it is here that many of the new Burpee varieties originated. Every year thousands of flowers are carefully hand-pollinated on Fordhook for the purpose of combining the most outstanding characteristics of the best existing varieties into new varieties of super excellence.

Burpee's Sweet Peas

Good as Gold

This sign, used by the ancient alchemists to represent "gold," has been used in our list of Sweet Peas to indicate the varieties which we consider most meritorious in their particular color classes. If you are in doubt which varieties to choose, you can safely follow the bull's eye.

The Summer Flowering Varieties

We recommend the Summer Flowering varieties for general outdoor growing throughout the United States, except in certain sections of the extreme South, where Sweet Peas flower during the winter and where the Early Flowering type gives best results. Many Sweet Pea lovers plant a short row of the Early Flowering kinds to get the advantage of early blooms, depending on the Summer Flowering varieties for their main crop from outdoor plantings during spring or fall.

Burpee's Sweet Peas

The Early or Winter-Flowering Varieties

These splendid Sweet Peas were, with a few exceptions, all introduced by Burpee. They are valuable to florists for greenhouse culture and are also adaptable to outdoor planting in warmer climates, such as certain sections of our own southern states, Australia, and South Africa. They do well in many sections where the summer-flowering varieties cannot be grown successfully. In cooler climates they are of value because they bloom a week or ten days earlier.

Flowering Bulbs and Roots

The bulbs and roots which we offer on the following pages have been grown with as much care as Burpee's Seeds. Most bulbs add a touch to the garden which cannot be created by any other flowers. Some of our most popular flowers are grown from bulbs. Just think of Dahlias, Gladiolus, and Lilies! Yet there are many other flowers grown from bulbs or roots which deserve to be planted just as widely. As a rule, it is easier to raise flowering plants from bulbs or roots than it is from seed. There are flowers grown from bulbs for almost every purpose. Many of them are excellent for garden displays; others are used extensively for pot-plants; and there are also a number of quick-growing climbers.

Beautiful Lilies

Lilies are of the easiest culture, and the varieties listed below are all perfectly hardy. After once being planted, they will increase in beauty and size with each succeeding year. Lilies do best in a well-drained sandy soil, which should be fairly rich, and the plants should be given plenty of water during periods of drought. In order to grow Lilies to large size, the bulbs should be planted deeply.

Six New Gladflowers

Originated in Scotland By One of the World's Greatest Gladiolus Growers

These are really sensational in every way. When traveling in Scotland a few years ago we were immensely impressed with the magnificent display of these new varieties. We immediately secured planting stock for propagation in this country. On our Fordhook Farms they have shown all the wonderful characteristics as when we saw them for the first time in Scotland.

8305 Berty Snow This was awarded a special prize at the New Jersey Gladiolus Show at Camden, N. J., in 1928, as being the most outstanding variety in the show. The plants average $3\frac{1}{2}$ feet in height and are strong and vigorous. A wonderful spike, strong and upright, with six to eight fully developed blooms open at once. The individual flowers are very large and of a pleasing light rosy lavender color with a white blotch in the throat. A variety of the highest merit.

8328 Mrs. Galbraith Magnificent blooms of a rich salmon pink, becoming lighter toward the throat. The throat itself is pale yellow, lightly penciled and spotted rose. The habit is strong and vigorous, and there are from six to eight fully expanded flowers open at once on a stem $3\frac{1}{2}$ feet tall.

The above two varieties are offered at the following prices:

Large Bulbs, \$1.00 each; 3 for \$2.50.

Small Bulbs, (guaranteed to bloom the first year), 50¢ each; 3 for \$1.35, postpaid.

8316 David Airdrie Magnificent in every respect. Spikes of great length strong, vigorous, and remarkably free blooming, with eight beautiful large well-expanded blooms open at once. A rich deep rose, shaded lighter and diffusing into a yellow tone in the throat.

8332 Marvel A beauty of most attractive color. The blooms are not only large but they are well placed on a sturdy stem. Its wonderful effect is due to the fact that there are seldom less than eight blooms open at one time. The flowers are white, edged with pink and shaded canary-yellow in the throat.

8323 Lillie Pale mauve blooms suffused with a small white blotch in the throat. The long wiry flower-spikes carry the blooms perfectly upright and rigid. There are always six and more often eight blooms open at one time.

8318 King George This variety is particularly showy. The blooms are a glowing scarlet with a contrasting yellow throat. King George is a strong grower and the stems are perfectly erect at all times. The flowers are artistically placed on the stem with eight and sometimes nine of them being open at one time.

These four varieties are offered at the following prices:

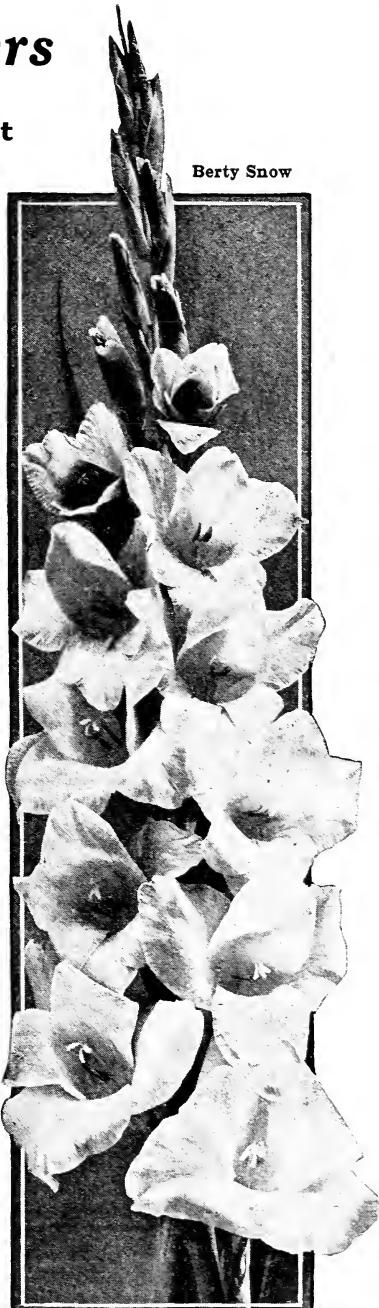

Large Bulbs, \$2.00 each; 3 for \$5.00.

Small Bulbs, (guaranteed to bloom the first year), \$1.00 each; 3 for \$2.50, postpaid.

A picture of the beautiful **Gold Medal** awarded to our new Gladflowers by the American Gladiolus Society. The New Jersey Gladiolus Society awarded them **First Prize** when exhibited at the Vineland Flower Show in the Fall of 1928.

They are of easiest culture, blooming freely in any average soil. All are perfectly hardy and present a beautiful sight when in full bloom. The flowers are borne on long, strong stems above the foliage. They make good cut-flowers, lasting a long time in water, but are just as fine for garden display.

Cactus and Hybrid Cactus Dahlias

This class of Dahlias is deservedly very popular. It embraces a magnificent range of colors, and the formation of the flowers is always most interesting. The true Cactus-Flowered varieties have petals which are typically quilled. This feature makes them highly artistic in appearance because of their unconventional forms. The Hybrid Cactus variety represents a type midway between the Decorative and Cactus-Flowered Dahlias. The flower-petals are usually broad at the base, curling over toward the middle, and ending in a more or less quilled tip. The formation of the petals adds strength to the blooms and that is the reason why this type of flower has unusual keeping qualities as a cut-flower.

Quality Farm Seeds

The farmer of today is fully aware that it pays him in dollars and cents to use seeds of known quality only. He knows that good seed is the first requirement for a good crop. Cheap seeds waste the time, labor, and fertilizer that have been used in preparation for the crop, and no after-care in cultivation can bring profitable returns.

Root Crops are one of the most important classes of all farm seeds, yet they are greatly neglected in many sections of this country. Their high food value makes them very desirable for stock feeding all the year round. They are easily stored throughout the winter. **Mangel Wurzel** and **Sugar Beets** are listed on page 60; **Carrots for Stock Feeding**, on page 57; **Turnips** and **Rutabagas**, on pages 60 and 61.
